

Tiger Supplise

TigerSup is a general supplier company that works specifically in providing hotel supplies like towels, shampoo, food supplies, etc. The company has several branches in several cities, and the company wants to create a central database for all its branches and client hotels considering the following conditions:

- 1- Each office has a unique code, a phone number, an address, and may include at least 4 employees with a manager.***
- 2- Each employee has an ID number, name, phone, address. An employee should work in only one office.***
- 3- Each office has at least one store to manage.***
- 4- Each Store has a code, address and a store must have a supervisor and one employee to serve in it which are counted as part of the managing office team.***
- 5- The store receives orders from the office to give the goods to client hotels and to receive shipments from factories.***
- 6- The store must report the status (amount) of goods it received and sent out back to their office as well as the dates.***
- 7- The database must include factories data: Name, product, address, contact person, phone.***
- 8- Each office deals with at least one hotel that buys its supplies from the company so the data must include all the hotels' names, addresses, phone, contact person and each hotel is given an ID in the database.***
